Business
Continuity

"MazeBolt Techologies provides us with a real time views of our DDoS vulnerabilities, allowing us to mitigate them in a timely manner which was not previously possible."
Yaron Weiss, VP Corporate Security and Global IT Operations (CISO).

Payoneer, a leading financial services company brings down DDoS risk from 45% to single digit while delivering business continuity

The Challenge

Payoneer's network changes continuously, providing global network access to third parties, adding new mail servers etc. Payoneer did not have the tools to configure DDoS Mitigation for the vulnerabilities that may be open due to network changes and result in sneakier DDoS attacks.

The Solution

Payoneer now uses MazeBolt's DDoS RADAR™ that has empowered its CISO and IT heads to clearly identify the number of vulnerabilities closed and % of improvement on an ongoing basis. The team can identify vulnerabilities immediately when they get generated across live production web-facing IPs. They can, thus, ensure that sneakier and small attacks do not go unnoticed and empower their mitigation vendor(s) with information on where the vulnerabilities have opened, allowing quick action.

The Benefit

Payoneer's Industry Standard DDoS risk of 45%, reduced to single digit. Continuous protection assessing DDoS Vulnerabilities 24/7 on live production ensures that mitigation vendor has fixed outstanding issues. It also empowers them with information on where the vulnerabilities have opened, allowing quick action.

Customer snapshot

Description

Payoneer is a financial services company that offers online money transfer and digital payment services. Its cross-border payments platform empowers businesses, online sellers and freelancers to grow their global commerce.

Industry

Financial Services

Business stats

More than 4 million customers, trust Payoneer to receive and manage their international payments.

About MazeBolt

MazeBolt is an innovation leader in cybersecurity and part of the DDoS mitigation space. Offering full DDoS risk detection and elimination and working with any mitigation system to provide end to end full coverage. Supporting organizations in avoiding downtime and closing DDoS vulnerabilities before an attack happens.
