Continuous
Protection

100%

Business
Continuity

“MazeBolt Technologies provides us with a real-time view of our DDoS vulnerabilities, allowing us to mitigate them in a timely manner which was not previously possible.” CISO, International Financial Services Company.

A leading financial company brings down DDoS risk from 45% to single-digit while delivering business continuity and uninterrupted availability.

The Challenge

This leading financial services company's network changes continuously, providing global network access to third parties, adding new mail servers, etc. This client did not have the tools to indicate attack surface coverage, opened in live environment, due to changes in underlying network. This could possibly lead to sneakier DDoS attacks passing through their DDoS mitigation.

The Solution

The client now uses MazeBolt's DDoS RADAR™ the only 24/7 automatic DDoS attack simulator on live environment with ZERO downtime and disruption. RADAR™ automatically detects, analyzes, and prioritizes the remediation of DDoS vulnerabilities in the client's existing mitigation system. Raising the efficiency of their mitigation solution and delivering the ultimate DDoS protection.

The Benefit

This client's Industry Standard DDoS risk of 45%, reduced to a single digit. Continuous protection assessing DDoS vulnerabilities 24/7 on live production ensures that the mitigation vendor has fixed outstanding issues. It also empowers them with information on where the vulnerabilities have opened, allowing quick action and ensuring uninterrupted availability.

Customer snapshot

Description

This leading financial services company offers money transfer and digital payment services. Its cross-border payments platform empowers businesses, online sellers, and freelancers to grow their global commerce.
